Sequential Experimentation in Clinical Trials: Design and Analysis: 298 (Springer Series in Statistics)

Jay Bartroff, Tze Leung Lai, Mei-Chiung Shih

Sequential Experimentation in Clinical Trials: Design and Analysis is developed from decades of work in research groups, statistical pedagogy, and workshop participation. Different parts of the book can be used for short courses on clinical trials, translational medical research, and sequential experimentation. The authors have successfully used the book to teach innovative clinical trial designs and statistical methods for Statistics Ph.D. students at Stanford University. There are additional online supplements for the book that include chapter-specific exercises and information.

Sequential Experimentation in Clinical Trials: Design and Analysis covers the much broader subject of sequential experimentation that includes group sequential and adaptive designs of Phase II and III clinical trials, which have attracted much attention in the past three decades. In particular, the broad scope of design and analysis problems in sequential experimentation clearly requires a wide range of statistical methods and models from nonlinear regression analysis, experimental design, dynamic programming, survival analysis, resampling, and likelihood and Bayesian inference. The background material in these building blocks is summarized in Chapter 2 and Chapter 3 and certain sections in Chapter 6 and Chapter 7. Besides group sequential tests and adaptive designs, the book also introduces sequential change-point detection methods in Chapter 5 in connection with pharmacovigilance and public health surveillance. Together with dynamic programming and approximate dynamic programming in Chapter 3, the book therefore covers all basic topics for a graduate course in sequential analysis designs.

From reader reviews:

Whitney Mallard:

Book is actually written, printed, or outlined for everything. You can learn everything you want by a reserve. Book has a different type. To be sure that book is important matter to bring us around the world. Close to that you can your reading proficiency was fluently. A publication Sequential Experimentation in Clinical Trials: Design and Analysis: 298 (Springer Series in Statistics) will make you to become smarter. You can feel far more confidence if you can know about every little thing. But some of you think that open or reading any book make you bored. It is far from make you fun. Why they are often thought like that? Have you trying to find best book or suited book with you?

Rose Hilton:

Reading a e-book tends to be new life style on this era globalization. With reading through you can get a lot of information that may give you benefit in your life. Having book everyone in this world can easily share their idea. Textbooks can also inspire a lot of people. Many author can inspire their reader with their story as well as their experience. Not only situation that share in the guides. But also they write about the ability about something that you need example. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors in this world always try to improve their ability in writing, they also doing some exploration before they write to the book. One of them is this Sequential Experimentation in Clinical Trials: Design and Analysis: 298 (Springer Series in Statistics).

Joseph Haner:

The actual book Sequential Experimentation in Clinical Trials: Design and Analysis: 298 (Springer Series in Statistics) has a lot associated with on it. So when you read this book you can get a lot of gain. The book was compiled by the very famous author. Mcdougal makes some research just before write this book. That book very easy to read you can find the point easily after reading this article book.

Carole Arehart:

In this period globalization it is important to someone to obtain information. The information will make a professional understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of sources to get information example: internet, newspaper, book, and soon. You will observe that now, a lot of publisher that will print many kinds of book. The actual book that recommended to your account is Sequential Experimentation in Clinical Trials: Design and Analysis: 298 (Springer Series in Statistics) this reserve consist a lot of the information of the condition of this world now. This kind of book was represented how do the world has grown up. The language styles that writer use to explain it is easy to understand. The actual writer made some investigation when he makes this book. Here is why this book appropriate all of you.
