Handbook of Angioplasty and Stenting Procedures (Techniques in Interventional Radiology)

Handbook of Angioplasty and Stenting Procedures (Techniques in Interventional Radiology)

Despite the fact that Interventional Radiology is steadily moving toward a clinical specialty with the need for broad medical training, daily craftsmanship will always remain fundamental to what an interventional radiologist does. Without basic catheter and wire skills IR would not be what it is today. When I watch experienced colleagues work I am always surprised to see that, concerning the technique and the materials, we all make the same choices. There is apparently a common IR skill, which is universal and can be learned with experience. I always see this with new IR fellows, that it takes time to step away from improvising and letting the procedure take the lead to logic and standardized control over a procedure. Choosing the right materials for the right job and building a level of confidence with these materials is a very important part of any IR fellowship. Why can a supervisor get a stable catheter position with a new wire in no time, whereas the fellow almost gives up? The difference is knowing your materials for this specific indication and combining routine and standardized operational procedures. Hands-on workshops are always very popular at every IR meeting because one can really learn about basic skills. Lectures with the title “How I do it,” can always count on a full audience.
