It is widely believed, and increasingly documented, that the United States is vulnerable to various types of information warfare attacks. Threats range from nuisance attacks by hackers to those potentially putting national security at risk. The latter might include attacks on essential U.S. information systems in a major regional crisis or theater war. The purpose might be to deter (or coerce) a U.S. intervention, to degrade U.S. power projection capabilities, to punish the United States or its allies, or to undermine the support of the American public for the conflict.
