The Theory of Differential Equations (Universitext) Walter G. Kelley

For over 300 years, differential equations have served as an essential tool for describing and analyzing problems in many scientific disciplines. This carefully-written textbook provides an introduction to many of the important topics associated with ordinary differential equations. Unlike most textbooks on the subject, this text includes nonstandard topics such as perturbation methods and differential equations and Mathematica. In addition to the nonstandard topics, this text also contains contemporary material in the area as well as its classical topics. This second edition is updated to be compatible with Mathematica, version 7.0. It also provides 81 additional exercises, a new section in Chapter 1 on the generalized logistic equation, an additional theorem in Chapter 2 concerning fundamental matrices, and many more other enhancements to the first edition. This book can be used either for a second course in ordinary differential equations or as an introductory course for well-prepared students. The prerequisites for this book are three semesters of calculus and a course in linear algebra, although the needed concepts from linear algebra are introduced along with examples in the book. An undergraduate course in analysis is needed for the more theoretical subjects covered in the final two chapters.

From reader reviews:

Jeffrey Brill:

In this age globalization it is important to someone to find information. The information will make someone to understand the condition of the world. The condition of the world makes the information better to share. You can find a lot of recommendations to get information example: internet, newspaper, book, and soon. You will see that now, a lot of publisher that will print many kinds of book. Often the book that recommended to you personally is The Theory of Differential Equations (Universitext) this book consist a lot of the information on the condition of this world now. This kind of book was represented just how can the world has grown up. The language styles that writer use for explain it is easy to understand. Often the writer made some study when he makes this book. Honestly, that is why this book acceptable all of you.

Fernando Levering:

This The Theory of Differential Equations (Universitext) is new way for you who has attention to look for some information given it relief your hunger associated with. Getting deeper you upon it getting knowledge more you know or else you who still having small amount of digest in reading this The Theory of Differential Equations (Universitext) can be the light food for you personally because the information inside this kind of book is easy to get simply by anyone. These books acquire itself in the form which can be reachable by anyone, that's why I mean in the e-book contact form. People who think that in reserve form make them feel drowsy even dizzy this e-book is the answer. So there is no in reading a guide especially this one. You can find what you are looking for. It should be here for anyone. So , don't miss this! Just read this e-book sort for your better life and knowledge.

Tom Copper:

Within this era which is the greater person or who has ability in doing something more are more important than other. Do you want to become certainly one of it? It is just simple solution to have that. What you have to do is just spending your time little but quite enough to have a look at some books. One of the books in the top checklist in your reading list is The Theory of Differential Equations (Universitext). This book that is qualified as The Hungry Hills can get you closer in getting precious person. By looking way up and review this book you can get many advantages.

Robert Hensley:

Publication is one of source of know-how. We can add our understanding from it. Not only for students but native or citizen require book to know the update information of year in order to year. As we know those guides have many advantages. Beside all of us add our knowledge, can also bring us to around the world. Through the book The Theory of Differential Equations (Universitext) we can acquire more advantage. Don't you to definitely be creative people? To get creative person must want to read a book. Just simply choose the best book that appropriate with your aim. Don't be doubt to change your life by this book The Theory of Differential Equations (Universitext). You can more desirable than now.
