Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice) Richard Chandler, Marian Scott

The need to understand and quantify change is fundamental throughout the environmental sciences. This might involve describing past variation, understanding the mechanisms underlying observed changes, making projections of possible future change, or monitoring the effect of intervening in some environmental system. This book provides an overview of modern statistical techniques that may be relevant in problems of this nature.

Practitioners studying environmental change will be familiar with many classical statistical procedures for the detection and estimation of trends. However, the ever increasing capacity to collect and process vast amounts of environmental information has led to growing awareness that such procedures are limited in the insights that they can deliver. At the same time, significant developments in statistical methodology have often been widely dispersed in the statistical literature and have therefore received limited exposure in the environmental science community. This book aims to provide a thorough but accessible review of these developments. It is split into two parts: the first provides an introduction to this area and the second part presents a collection of case studies illustrating the practical application of modern statistical approaches to the analysis of trends in real studies.

Key Features:

- Presents a thorough introduction to the practical application and methodology of trend analysis in environmental science.
- Explores non-parametric estimation and testing as well as parametric techniques.
- Methods are illustrated using case studies from a variety of environmental application areas.
- Looks at trends in all aspects of a process including mean, percentiles and extremes.
- Supported by an accompanying website featuring datasets and R code.

The book is designed to be accessible to readers with some basic statistical training, but also contains sufficient detail to serve as a reference for practising statisticians. It will therefore be of use to postgraduate students and researchers both in the environmental sciences and in statistics.

From reader reviews:

Mary Sylvester:

This Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice) book is not really ordinary book, you have after that it the world is in your hands. The benefit you will get by reading this book is usually information inside this reserve incredible fresh, you will get details which is getting deeper anyone read a lot of information you will get. This kind of Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice) without we recognize teach the one who reading through it become critical in contemplating and analyzing. Don't become worry Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice) can bring once you are and not make your tote space or bookshelves' come to be full because you can have it with your lovely laptop even phone. This Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice) having fine arrangement in word as well as layout, so you will not truly feel uninterested in reading.

Arlie Carrillo:

Information is provisions for people to get better life, information these days can get by anyone from everywhere. The information can be a information or any news even a huge concern. What people must be consider if those information which is from the former life are challenging be find than now is taking seriously which one is suitable to believe or which one often the resource are convinced. If you get the unstable resource then you have it as your main information we will see huge disadvantage for you. All of those possibilities will not happen inside you if you take Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice) as your daily resource information.

Bruce Jackson:

Spent a free time and energy to be fun activity to complete! A lot of people spent their leisure time with their family, or their particular friends. Usually they carrying out activity like watching television, likely to beach, or picnic within the park. They actually doing same task every week. Do you feel it? Do you want to something different to fill your personal free time/ holiday? May be reading a book may be option to fill your no cost time/ holiday. The first thing that you ask may be what kinds of guide that you should read. If you want to try out look for book, may be the guide untitled Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice) can be excellent book to read. May be it might be best activity to you.

Adam Carter:

In this era which is the greater individual or who has ability in doing something more are more precious than other. Do you want to become among it? It is just simple strategy to have that. What you should do is just spending your time little but quite enough to experience a look at some books. One of many books in the top

list in your reading list is Statistical Methods for Trend Detection and Analysis in the Environmental Sciences (Statistics in Practice). This book which can be qualified as The Hungry Slopes can get you closer in getting precious person. By looking up and review this book you can get many advantages.
