Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics)

Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics)

This book contains the full papers presented at the MICCAI 2013 workshop Bio-Imaging and Visualization for Patient-Customized Simulations (MWBIVPCS 2013). MWBIVPCS 2013 brought together researchers representing several fields, such as Biomechanics, Engineering, Medicine, Mathematics, Physics and Statistic.

The contributions included in this book present and discuss new trends in those fields, using several methods and techniques, including the finite element method, similarity metrics, optimization processes, graphs, hidden Markov models, sensor calibration, fuzzy logic, data mining, cellular automation, active shape models, template matching and level sets. These serve as tools to address more efficiently different and timely applications involving signal and image acquisition, image processing and analysis, image segmentation, image registration and fusion, computer simulation, image based modelling, simulation and surgical planning, image guided robot assisted surgical and image based diagnosis.

This book will appeal to researchers, PhD students and graduate students with multidisciplinary interests related to the areas of medical imaging, image processing and analysis, computer vision, image segmentation, image registration and fusion, scientific data visualization and image based modeling and simulation.

From reader reviews:

Paul Skeens:

The book Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics) can give more knowledge and also the precise product information about everything you want. So why must we leave a good thing like a book Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics)? Some of you have a different opinion about guide. But one aim in which book can give many information for us. It is absolutely suitable. Right now, try to closer using your book. Knowledge or details that you take for that, you are able to give for each other; it is possible to share all of these. Book Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics) has simple shape but the truth is know: it has great and big function for you. You can appear the enormous world by open and read a reserve. So it is very wonderful.

Alberta Smith:

This Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics) is new way for you who has attention to look for some information mainly because it relief your hunger of knowledge. Getting deeper you in it getting knowledge more you know otherwise you who still having bit of digest in reading this Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics) can be the light food for you personally because the information inside this particular book is easy to get through anyone. These books create itself in the form which is reachable by anyone, that's why I mean in the e-book application form. People who think that in guide form make them feel tired even dizzy this publication is the answer. So there is no in reading a reserve especially this one. You can find what you are looking for. It should be here for you. So , don't miss the item! Just read this e-book kind for your better life along with knowledge.

Judy Turner:

Don't be worry when you are afraid that this book may filled the space in your house, you might have it in e-book technique, more simple and reachable. That Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics) can give you a lot of friends because by you checking out this one book you have factor that they don't and make a person more like an interesting person. This specific book can be one of one step for you to get success. This book offer you information that might be your friend doesn't know, by knowing more than other make you to be great people. So , why hesitate? Let me have Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics).

Ernie Fleishman:

As a student exactly feel bored to be able to reading. If their teacher expected them to go to the library or to make summary for some reserve, they are complained. Just little students that has reading's soul or real their hobby. They just do what the trainer want, like asked to go to the library. They go to right now there but nothing reading significantly. Any students feel that studying is not important, boring along with can't see colorful photographs on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this time, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore , this Bio-Imaging and Visualization for Patient-Customized Simulations: 13 (Lecture Notes in Computational Vision and Biomechanics) can make you feel more interested to read.
