Ken J. Barnes

Group Theory for the Standard Model of Particle Physics and Beyond (Series in High Energy Physics, Cosmology and Gravitation) Ken J. Barnes

Based on the author's well-established courses, **Group Theory for the Standard Model of Particle Physics and Beyond** explores the use of symmetries through descriptions of the techniques of Lie groups and Lie algebras. The text develops the models, theoretical framework, and mathematical tools to understand these symmetries.

After linking symmetries with conservation laws, the book works through the mathematics of angular momentum and extends operators and functions of classical mechanics to quantum mechanics. It then covers the mathematical framework for special relativity and the internal symmetries of the standard model of elementary particle physics. In the chapter on Noether's theorem, the author explains how Lagrangian formalism provides a natural framework for the quantum mechanical interpretation of symmetry principles. He then examines electromagnetic, weak, and strong interactions; spontaneous symmetry breaking; the elusive Higgs boson; and supersymmetry. He also introduces new techniques based on extending space-time into dimensions described by anticommuting coordinates.

Designed for graduate and advanced undergraduate students in physics, this text provides succinct yet complete coverage of the group theory of the symmetries of the standard model of elementary particle physics. It will help students understand current knowledge about the standard model as well as the physics that potentially lies beyond the standard model.

From reader reviews:

Linda Banks:

Have you spare time for any day? What do you do when you have much more or little spare time? Yeah, you can choose the suitable activity to get spend your time. Any person spent their spare time to take a move, shopping, or went to often the Mall. How about open or read a book entitled Group Theory for the Standard Model of Particle Physics and Beyond (Series in High Energy Physics, Cosmology and Gravitation)? Maybe it is to get best activity for you. You recognize beside you can spend your time with the favorite's book, you can better than before. Do you agree with it is opinion or you have some other opinion?

William Bixby:

The book Group Theory for the Standard Model of Particle Physics and Beyond (Series in High Energy Physics, Cosmology and Gravitation) has a lot info on it. So when you check out this book you can get a lot of profit. The book was authored by the very famous author. Tom makes some research previous to write this book. This book very easy to read you can find the point easily after looking over this book.

Pedro Dillon:

Playing with family in a very park, coming to see the coastal world or hanging out with buddies is thing that usually you might have done when you have spare time, and then why you don't try point that really opposite from that. A single activity that make you not experience tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of information. Even you love Group Theory for the Standard Model of Particle Physics and Beyond (Series in High Energy Physics, Cosmology and Gravitation), you are able to enjoy both. It is great combination right, you still wish to miss it? What kind of hangout type is it? Oh can occur its mind hangout guys. What? Still don't have it, oh come on its referred to as reading friends.

Joy Rodriguez:

As a pupil exactly feel bored to reading. If their teacher questioned them to go to the library or to make summary for some publication, they are complained. Just very little students that has reading's spirit or real their hobby. They just do what the professor want, like asked to go to the library. They go to presently there but nothing reading significantly. Any students feel that reading is not important, boring in addition to can't see colorful pictures on there. Yeah, it is to become complicated. Book is very important for yourself. As we know that on this era, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore this Group Theory for the Standard Model of Particle Physics and Beyond (Series in High Energy Physics, Cosmology and Gravitation) can make you experience more interested to read.
